Solutions for Expanding the Services of Arborists on a Budget

On-the-Go Application Tank

Easily transportable Tank that won't take up a truck bed or need a trailer

"What makes these tanks unique is their design, along with a specially modified hitch assembly, making them the most versatile, transportable piece of equipment on the market today."

The Inside Scoop about our On-the-Go Application Tank

The first application tank on the market that doesn't require a trailer or truck bed for transport. It can be used **on or off** the vehicle during application use. Custom-designed construction allows the arborist or applicator to **easily move** the tank assembly over lawns, interiors, through small entries & gates, and other hard-to-reach areas.

Created with a 5.5 Hp **engine and pump** that can produce over 300 psi and has a constant jet agitation within the tank, connected to 40 ft. of **resilient hose** and a modified hitch. The **30-gallon tank** allows fast cleaning and is made of tough polyethylene with U.V. inhibitors. The **modified hitch** fits into a standard receiver for rapid utilization by the applicator.

Be more efficient, less back & forth to the office. An economical piece of equipment created from field research, high quality materials, and specialty fabrication. *Designed for Arborists by Arborists.*
